University of Oklahoma Health Sciences Center*

-----

It is with great sadness that I inform you that our colleague and friend Lee Jun Wong passed away on Thursday April 29 peacefully surrounded by family after a long fight with a terminal illness.

Lee Jun was a scientific leader in the field of mitochondrial disease and diagnosis, and a warm and generous colleague and friend who was always eager to collaborate.

She was a wonderful contributor to all the missions of our department of Molecular and Human Genetics at Baylor and a friend and supporter to many throughout the world.

She will be deeply missed.
